

## ESA, Inc Awarded Contaminated Soils Remediation Project at Denver Federal Center

ESA, Inc. and RE Monks Construction have been awarded the \$5.2 million Asbestos Soil Remediation project at the Denver Federal Center. The contract includes 121,000 cubic yards of excavation as well as the loading and hauling of approximately 30,000 cubic yards of asbestos contaminated soil. The project also requires the building of a parking lot, and all final site work for the future Centura Health Hospital at Alameda & Kipling in Lakewood.

Walsh Environmental will provide all of the project oversight, and our partner RE Monks Construction will handle the site work for the project, including trucking and parking lot construction. ESA will line, load, wrap and handle all of the asbestos contaminated soil.

Eight pre-qualified teams bid on the project. After being short-listed, ESA and RE Monks were found to have the most qualified team to complete the project on a tight schedule and during tough winter conditions.

ESA has become a national leader in contaminated soil remediation, having removed over one million cubic yards of contaminated soil in recent years. We are proud to have our expertise recognized through the award of this challenging project.

Recent Denver area contaminated soils projects include:

Former Stapleton International Airport, Asbestos Contaminated Soil  
Contract Value: over \$15 million (ongoing)

Auraria Science Center, University of Colorado, Asbestos Contaminated Soil  
Contract Value: \$1.95 million

Riverpoint at Sheridan Landfill Cleanup, Asbestos Contaminated Soil  
Contract Value: \$300,000

ESA, Inc. is the Contaminated Soils expert. Please call us if we can help you with your upcoming environmental solution.

Sincerely,

Kory Mitchell  
Director – Business Development
