ESA, Inc. Awarded the Historical Fox Theater Demolition in Laramie, Wyoming

ESA, Inc., a demolition and abatement company with offices in Denver, Colorado, Omaha, Nebraska and North Sioux City, SD, has been awarded the demolition and environmental remediation of the Fox Theater in Laramie, Wyoming valued at \$989,000. ESA is particularly proud of this award as it showcases our expertise in complicated demolition projects involving hazardous materials. Award of this project was based on various factors including: strength of demolition plan, safety controls, as well as experience in managing projects of this scope and complexity.

In 2008, the City of Laramie determined the building to be unsafe, and sought after qualified contractors to assess the hazard. ESA's Demolition Division Manager Curt Creager, with over 30 years experience in the demolition industry, was contacted to construct an all-inclusive demolition plan comprising the assessment of the environmental hazards associated with this unique and complicated project. Assembling a professional team in 2008 to provide the City of Laramie with the comprehensive expertise required in this endeavor, Mr. Creager selected Spectrum Services, Inc. and JVA Engineers, Inc. for environmental monitoring and structural engineering services. After a Request For Proposal (RFP) process in May 2009, ESA was awarded the demolition and handling of all associated hazardous materials. Spectrum Services will provide all of the project oversight, while ESA personnel will hand dismantle the entire structure in order to prevent the collapse of two adjoining structures. When the structure is brought to the ground, ESA will line, load, and haul trucks in order to safely transport the asbestos contaminated debris to a certified disposal facility.

Named by Engineering News Record in 2008 as "One of the Top 15 Abatement Contractors in the United States," ESA has additionally emerged as a national leader in demolition and contaminated soil remediation. ESA is proud of this award as it demonstrates our ability to offer turnkey environmental and demolition solutions.

Other 2009 Projects Include:

Former Stapleton International Airport: Demolition & Asbestos Contaminated Soil. Contract Value: over \$15 million (ongoing)

Denver Federal Center: Demolition & Asbestos Contaminated Soil.
Contract Value: \$1.2 million (ongoing)

KD Station: Asbestos Abatement. Contract Value: \$550,000 (ongoing)

Sincerely,

Kory Mitchell
